we have a totla record COVID cases of

12,901

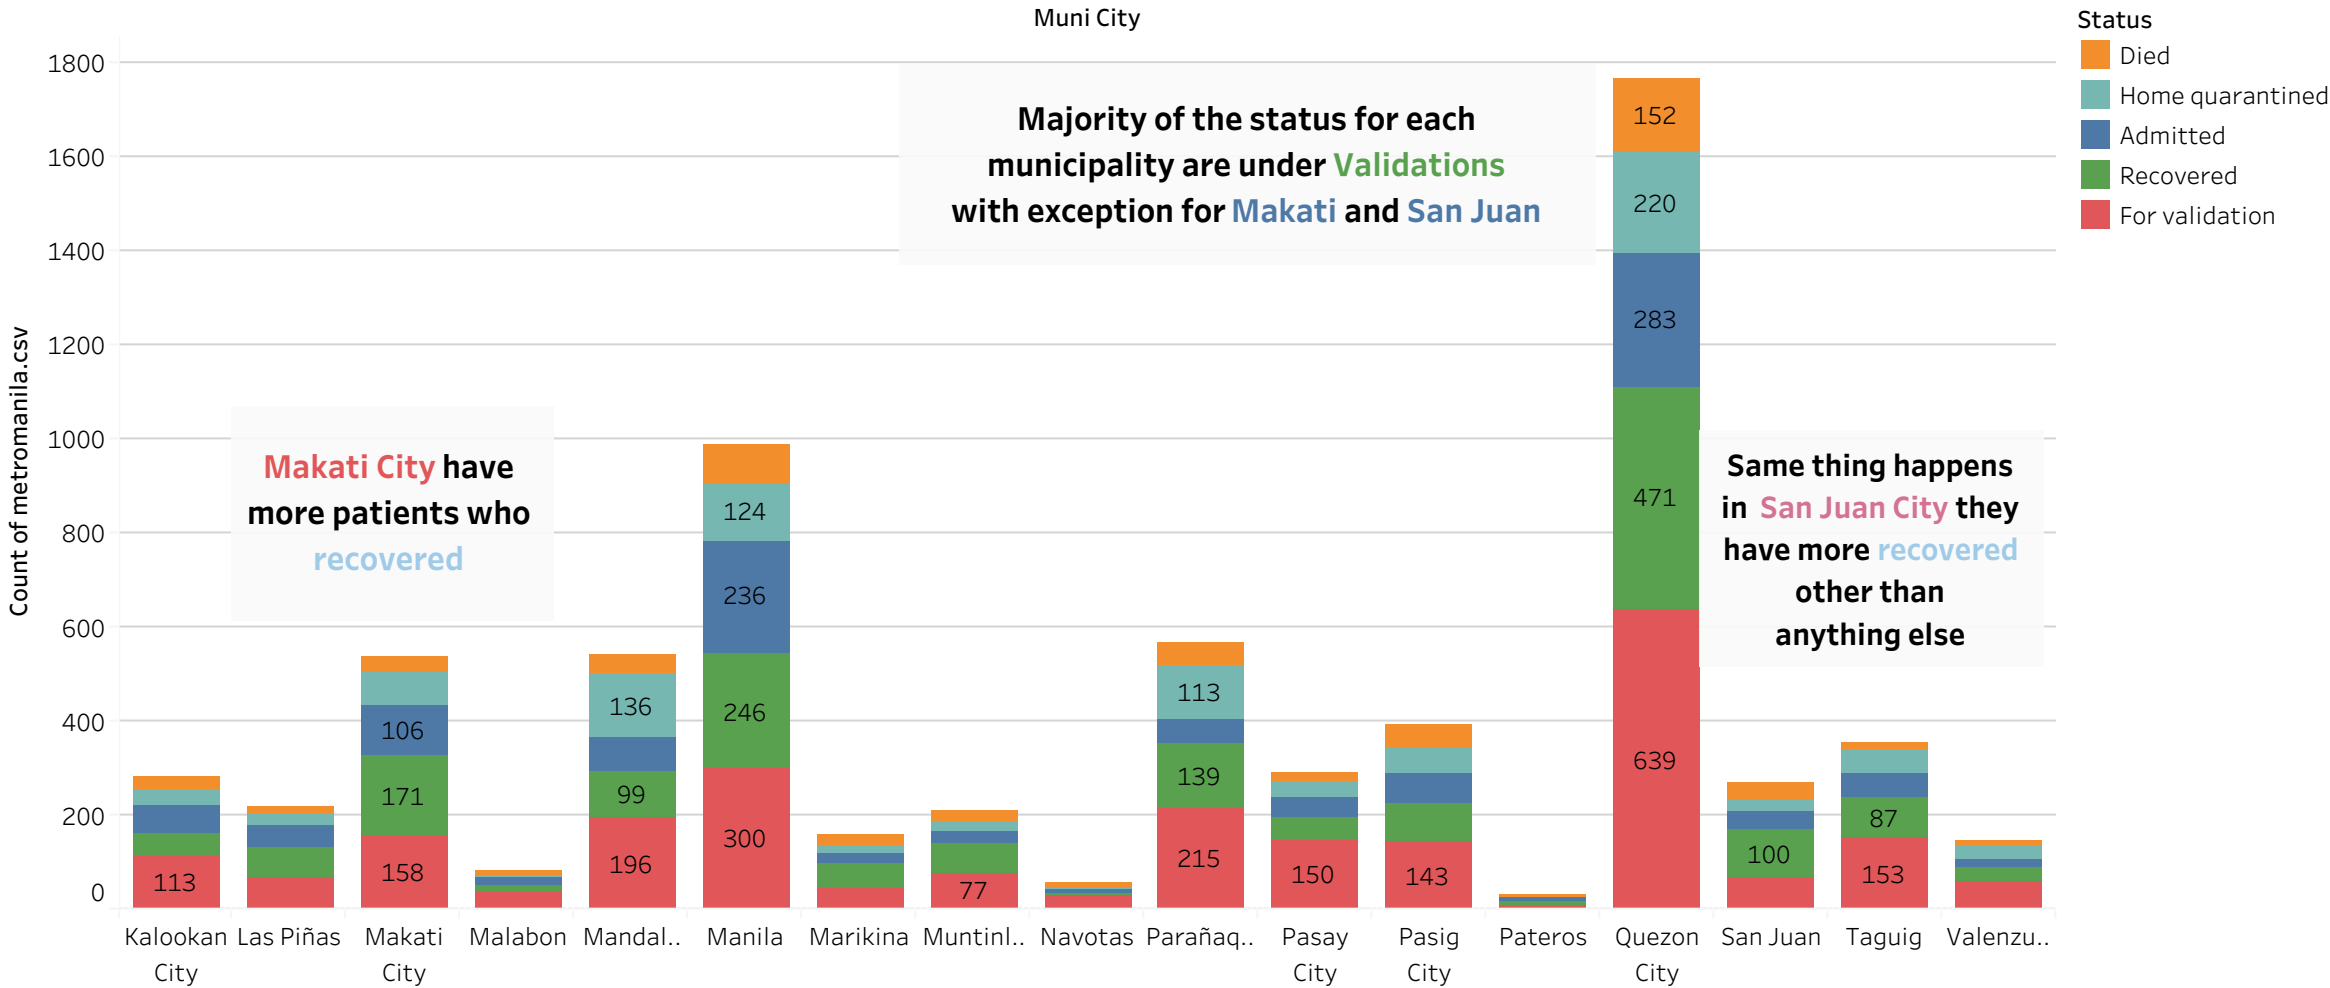

Since majority of them were from

Metro Manila

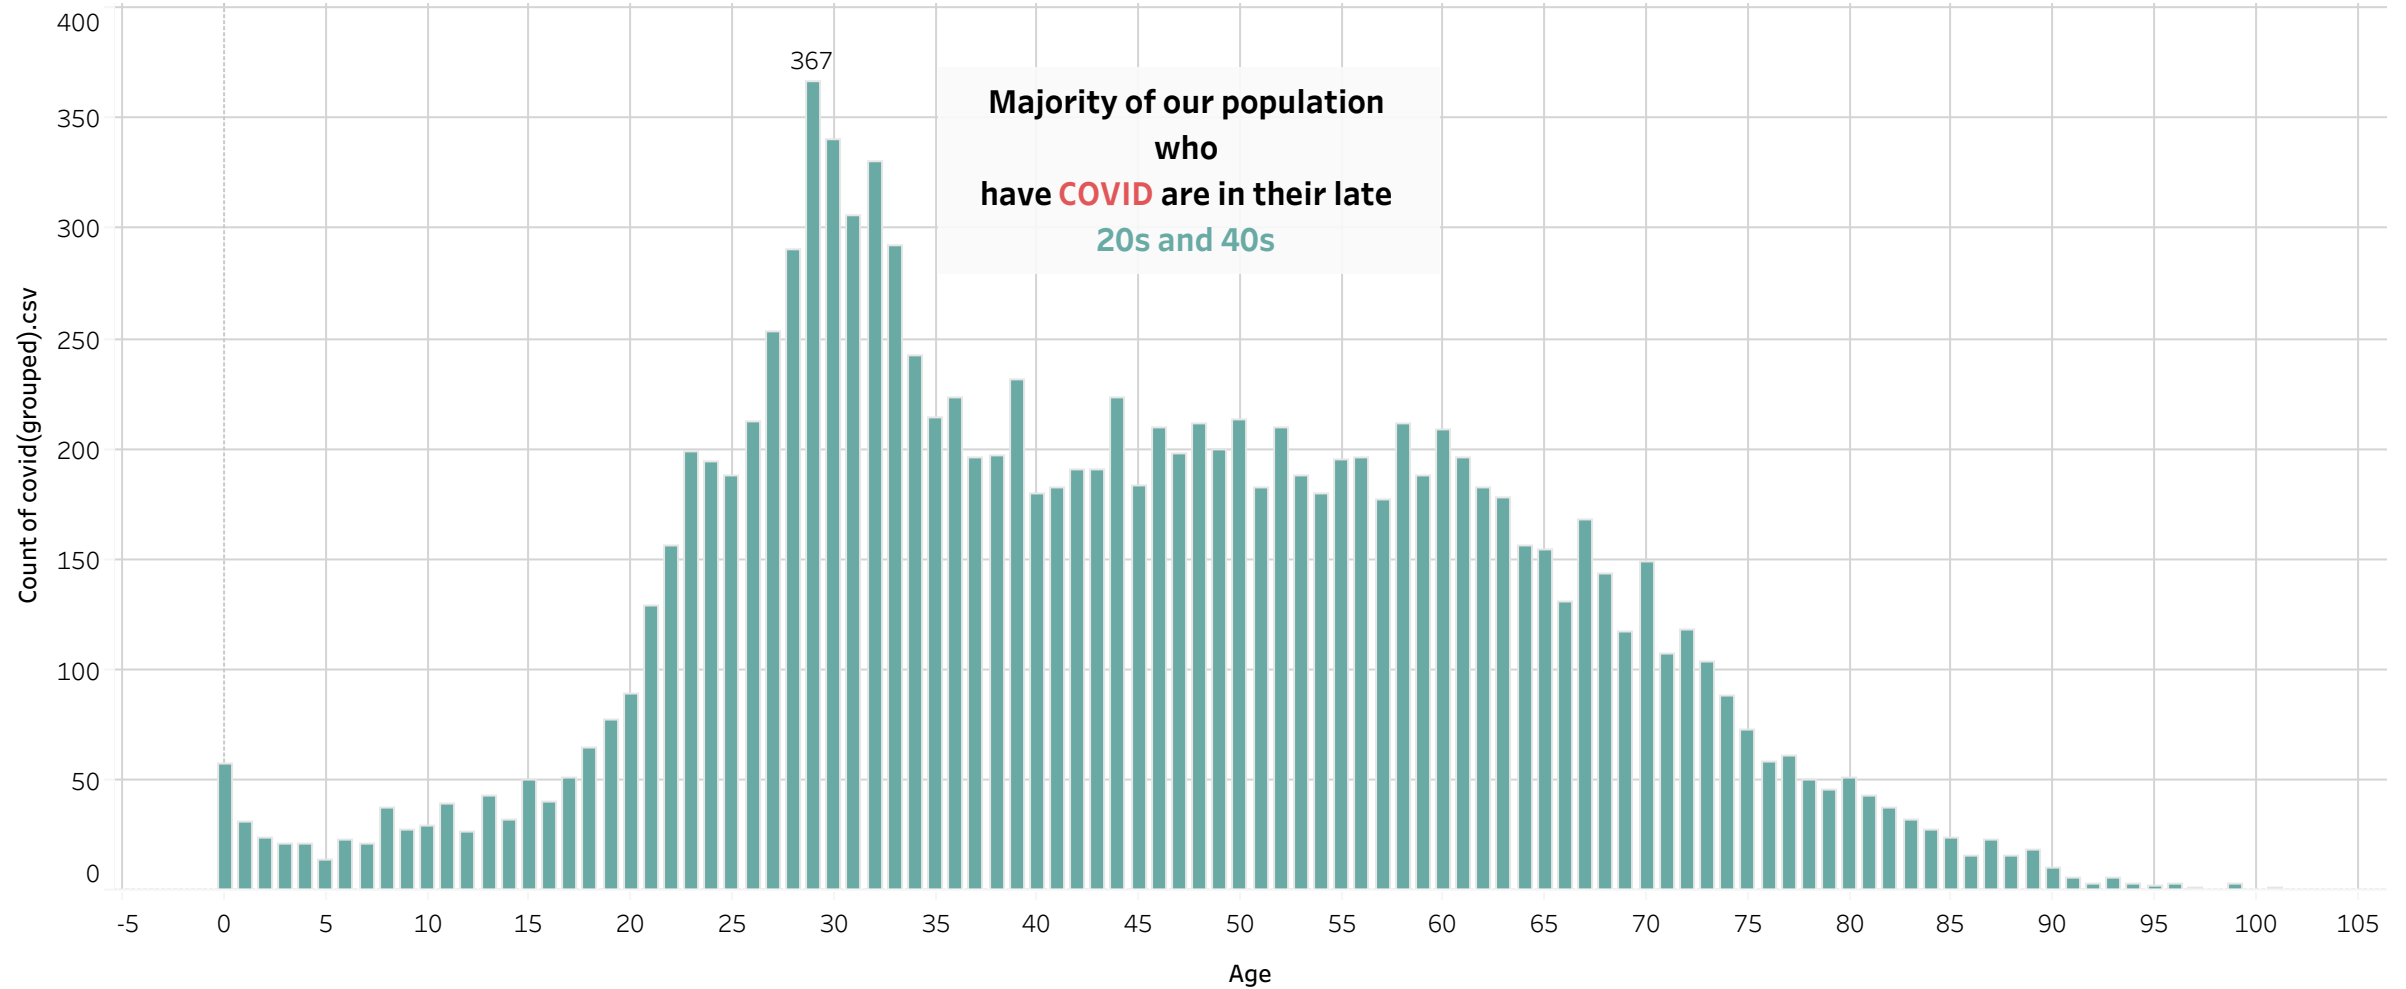

Let's break it down into that

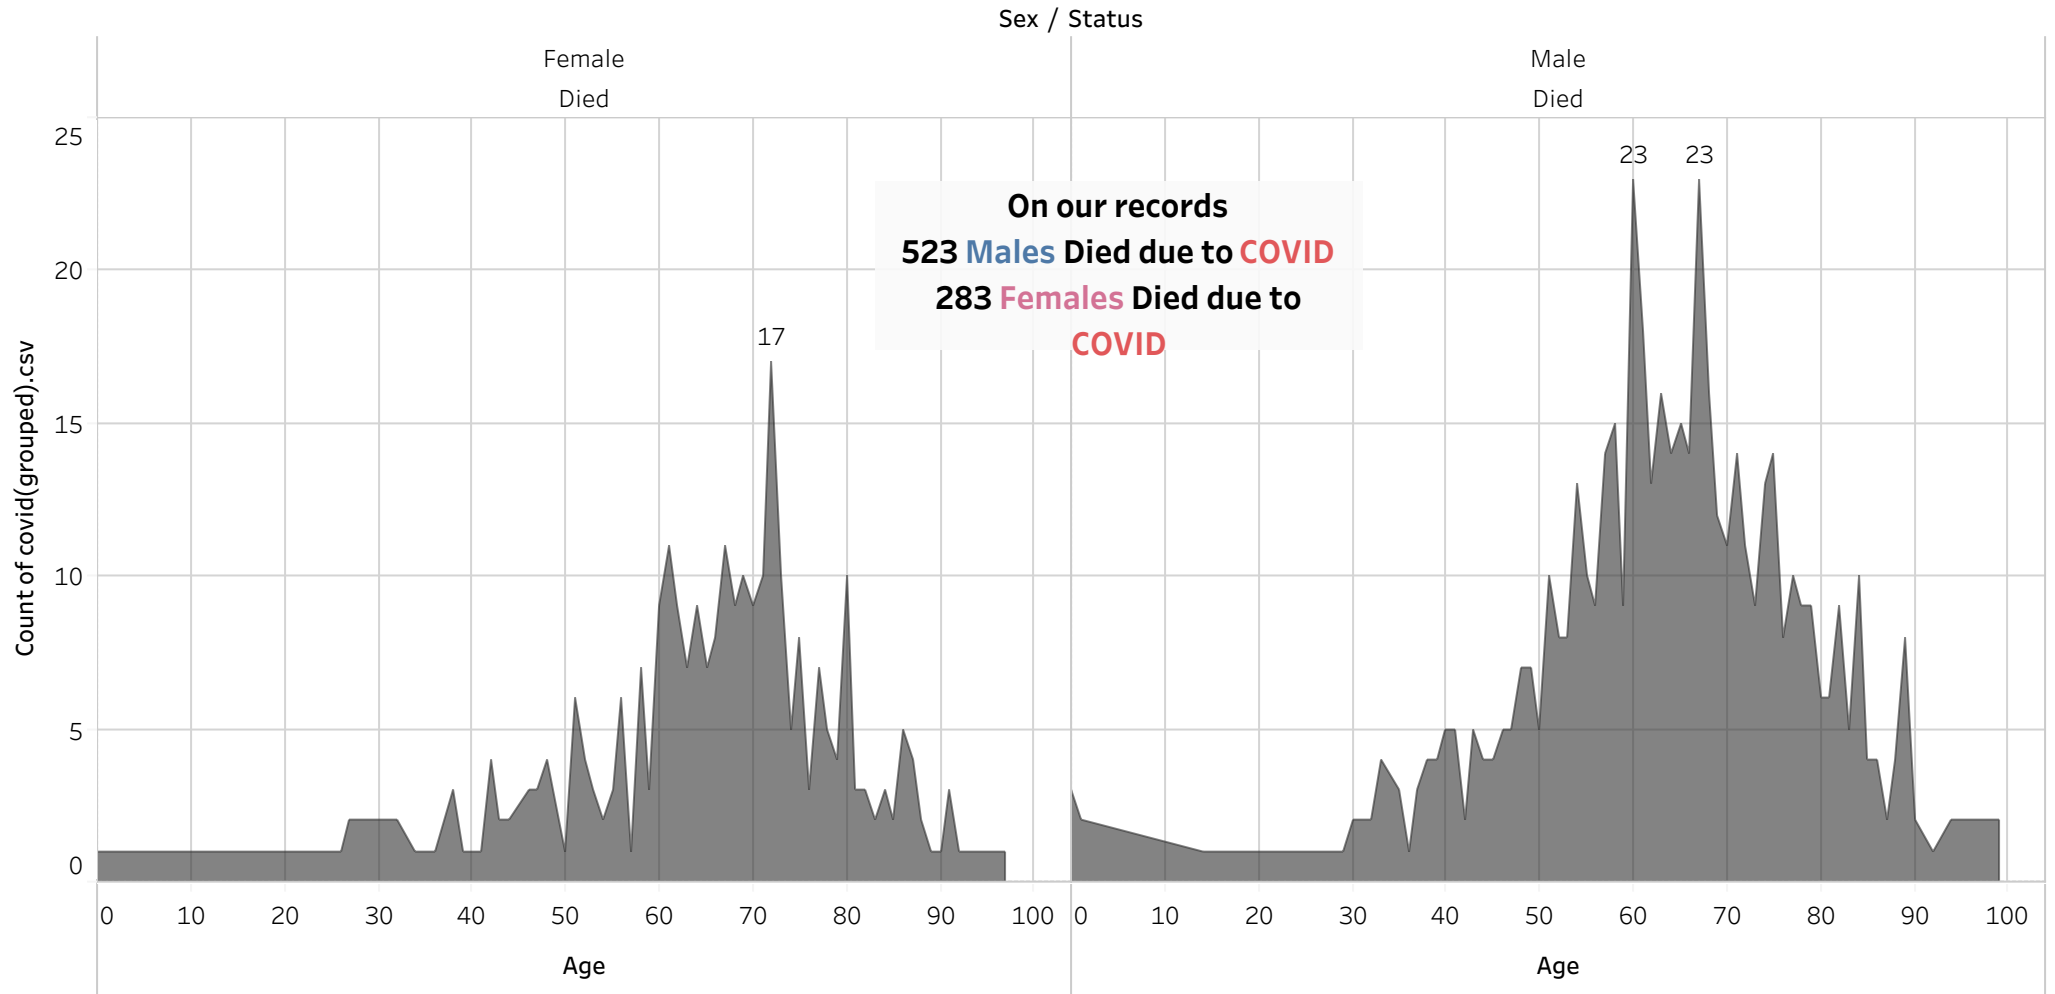

# Breakdown of Patient's Status based on their Municipality in Metro Manila

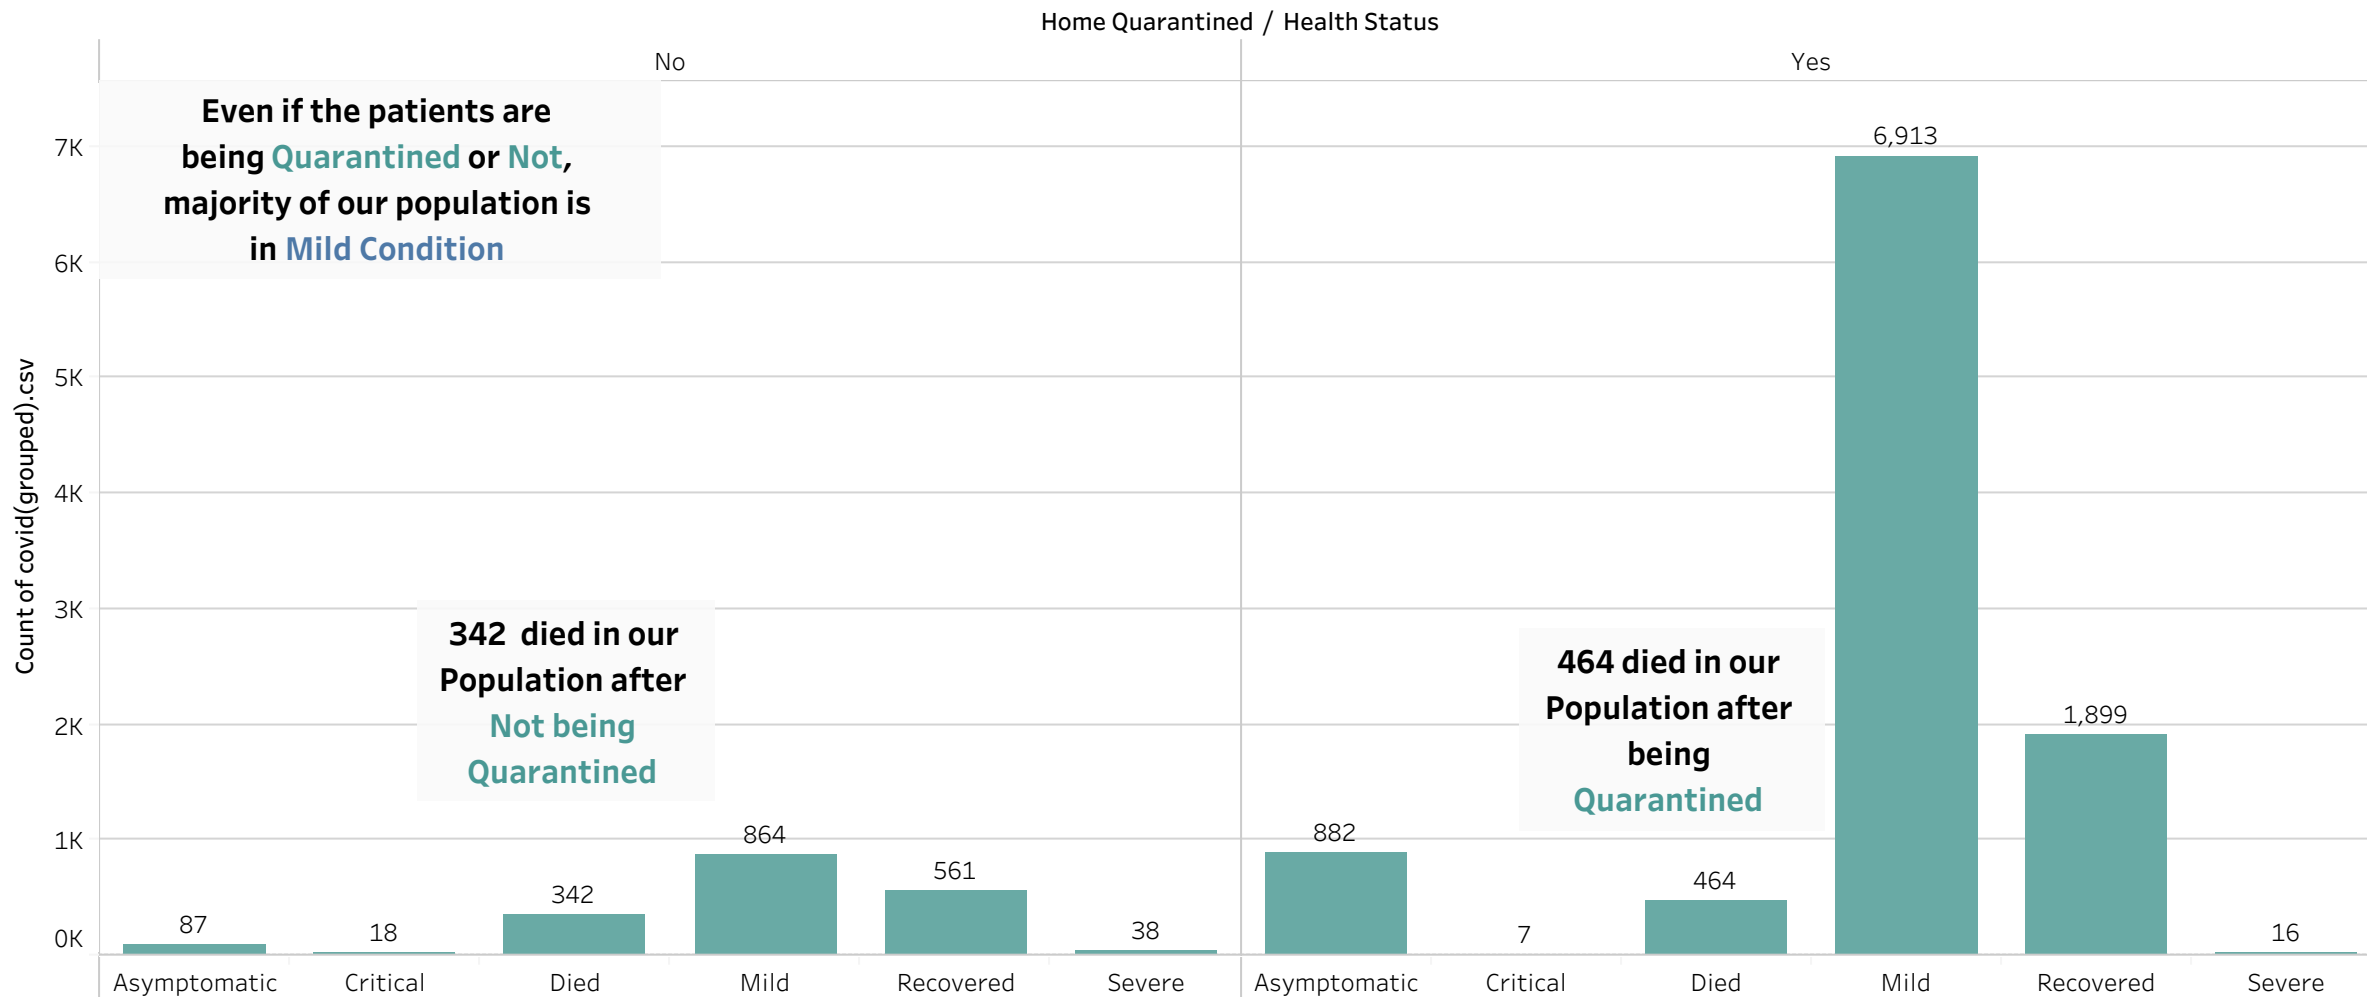

## Age of our Population

# Ages in our Population who Died due to COVID

## Health Status of our Population after being quarantined or not

# Population who recovered and died

Status / Home Quarantined

Died

Recovered

**COVID** doesn't choose anyone as their victims  
it could be anyone living **anywhere** or **everywhere**

The difference in number of those who **recovered**  
and those who **died** is pretty large. However, it does  
not mean that we are **immune** to it

**KEEP SAFE EVERYONE**
